

ARCHICAD DETAIL DRAWING TUTORIAL

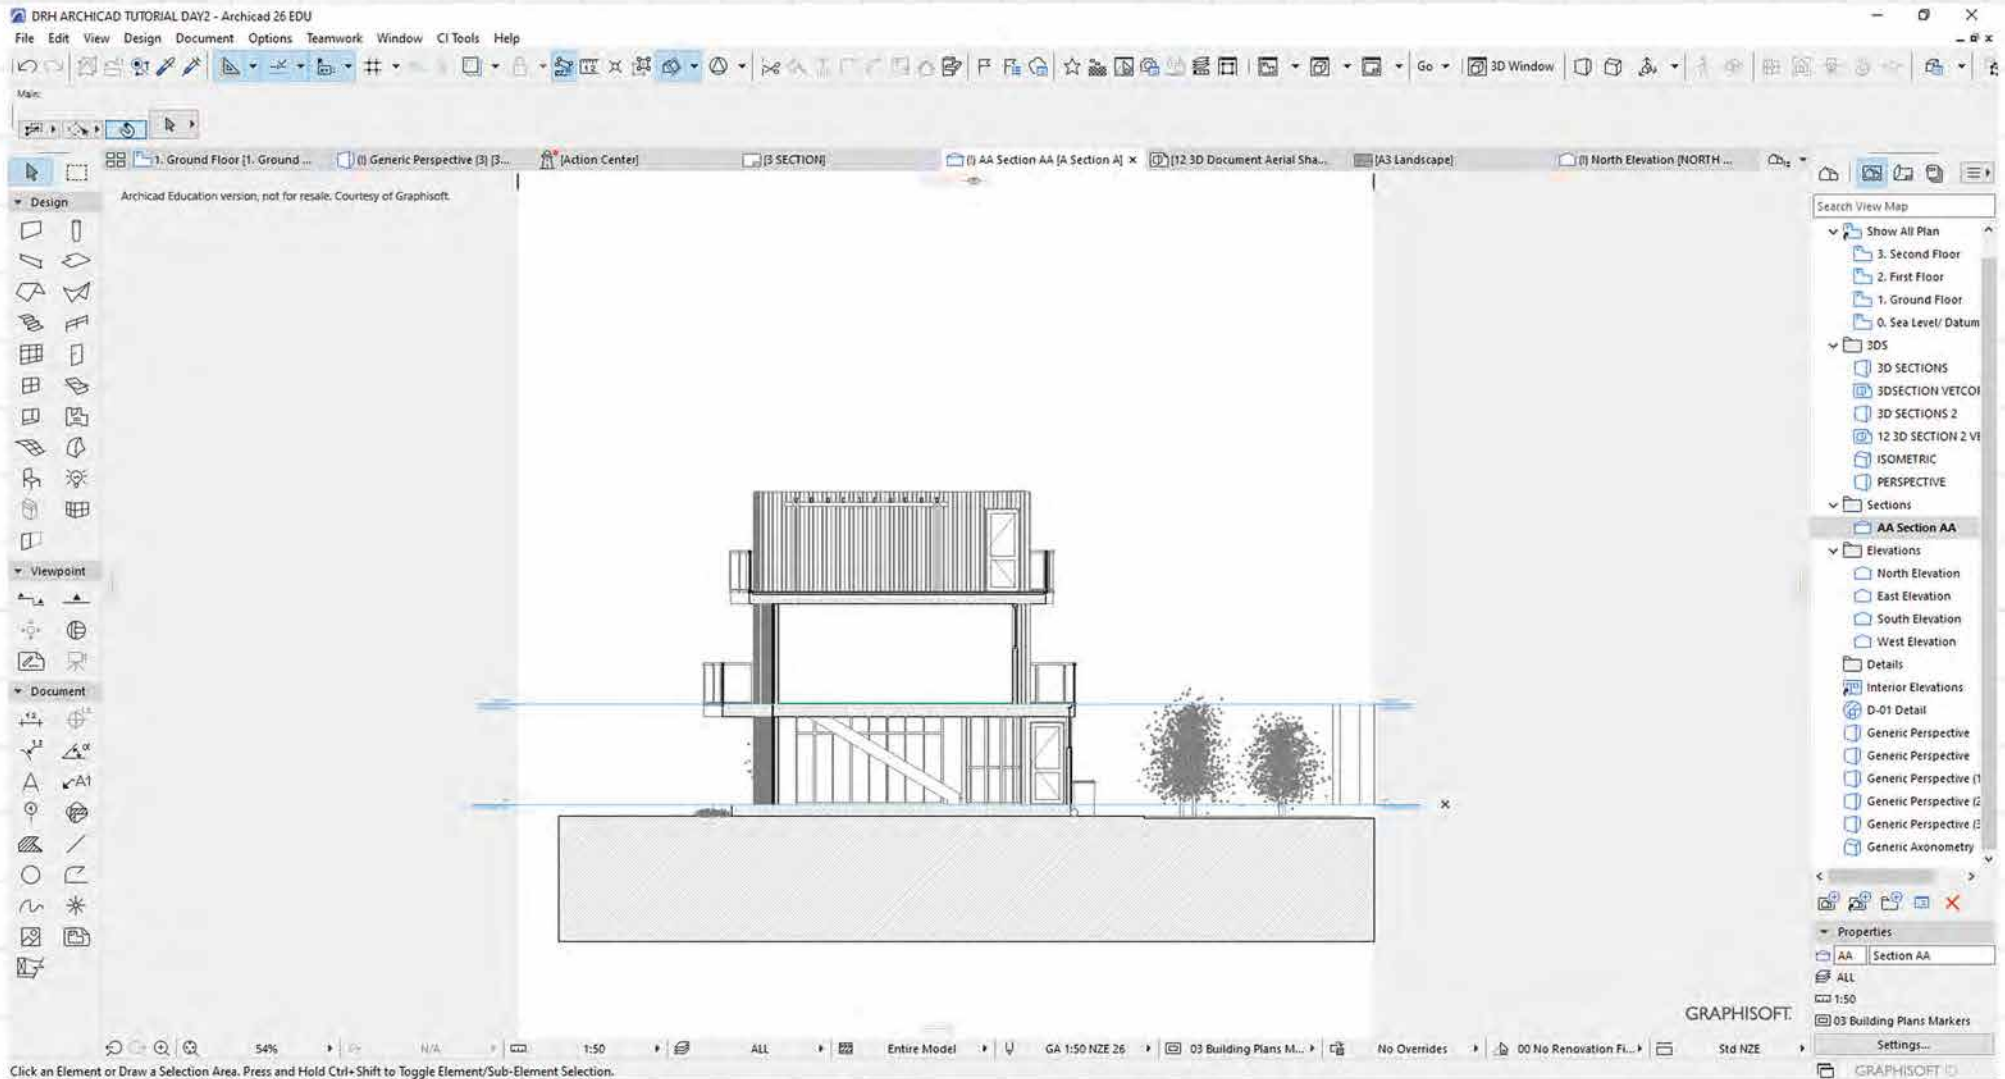

GRAPHISOFT
Archicad

- . Open up your project file on ArchiCad
- . Select window on which the detail marker will be placed - Floorplans / Section / Elevation etc.

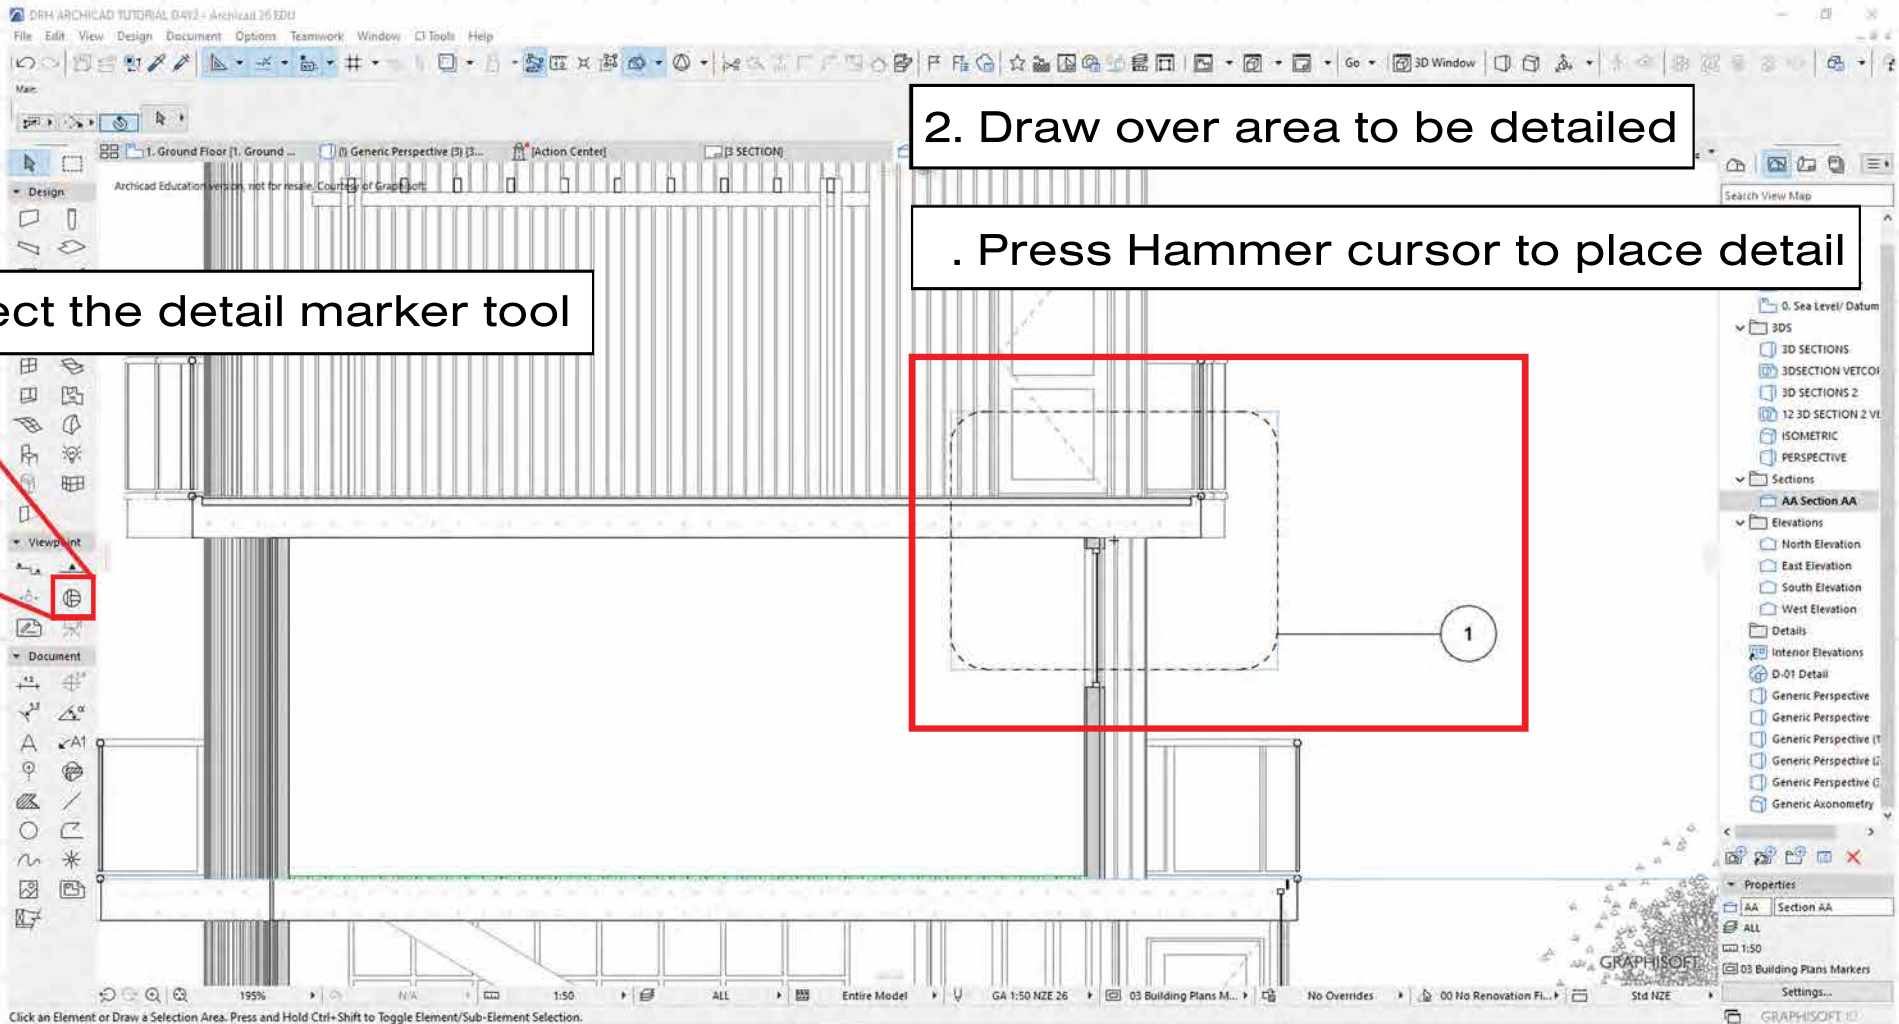

- Section view is selected for the detail drawing

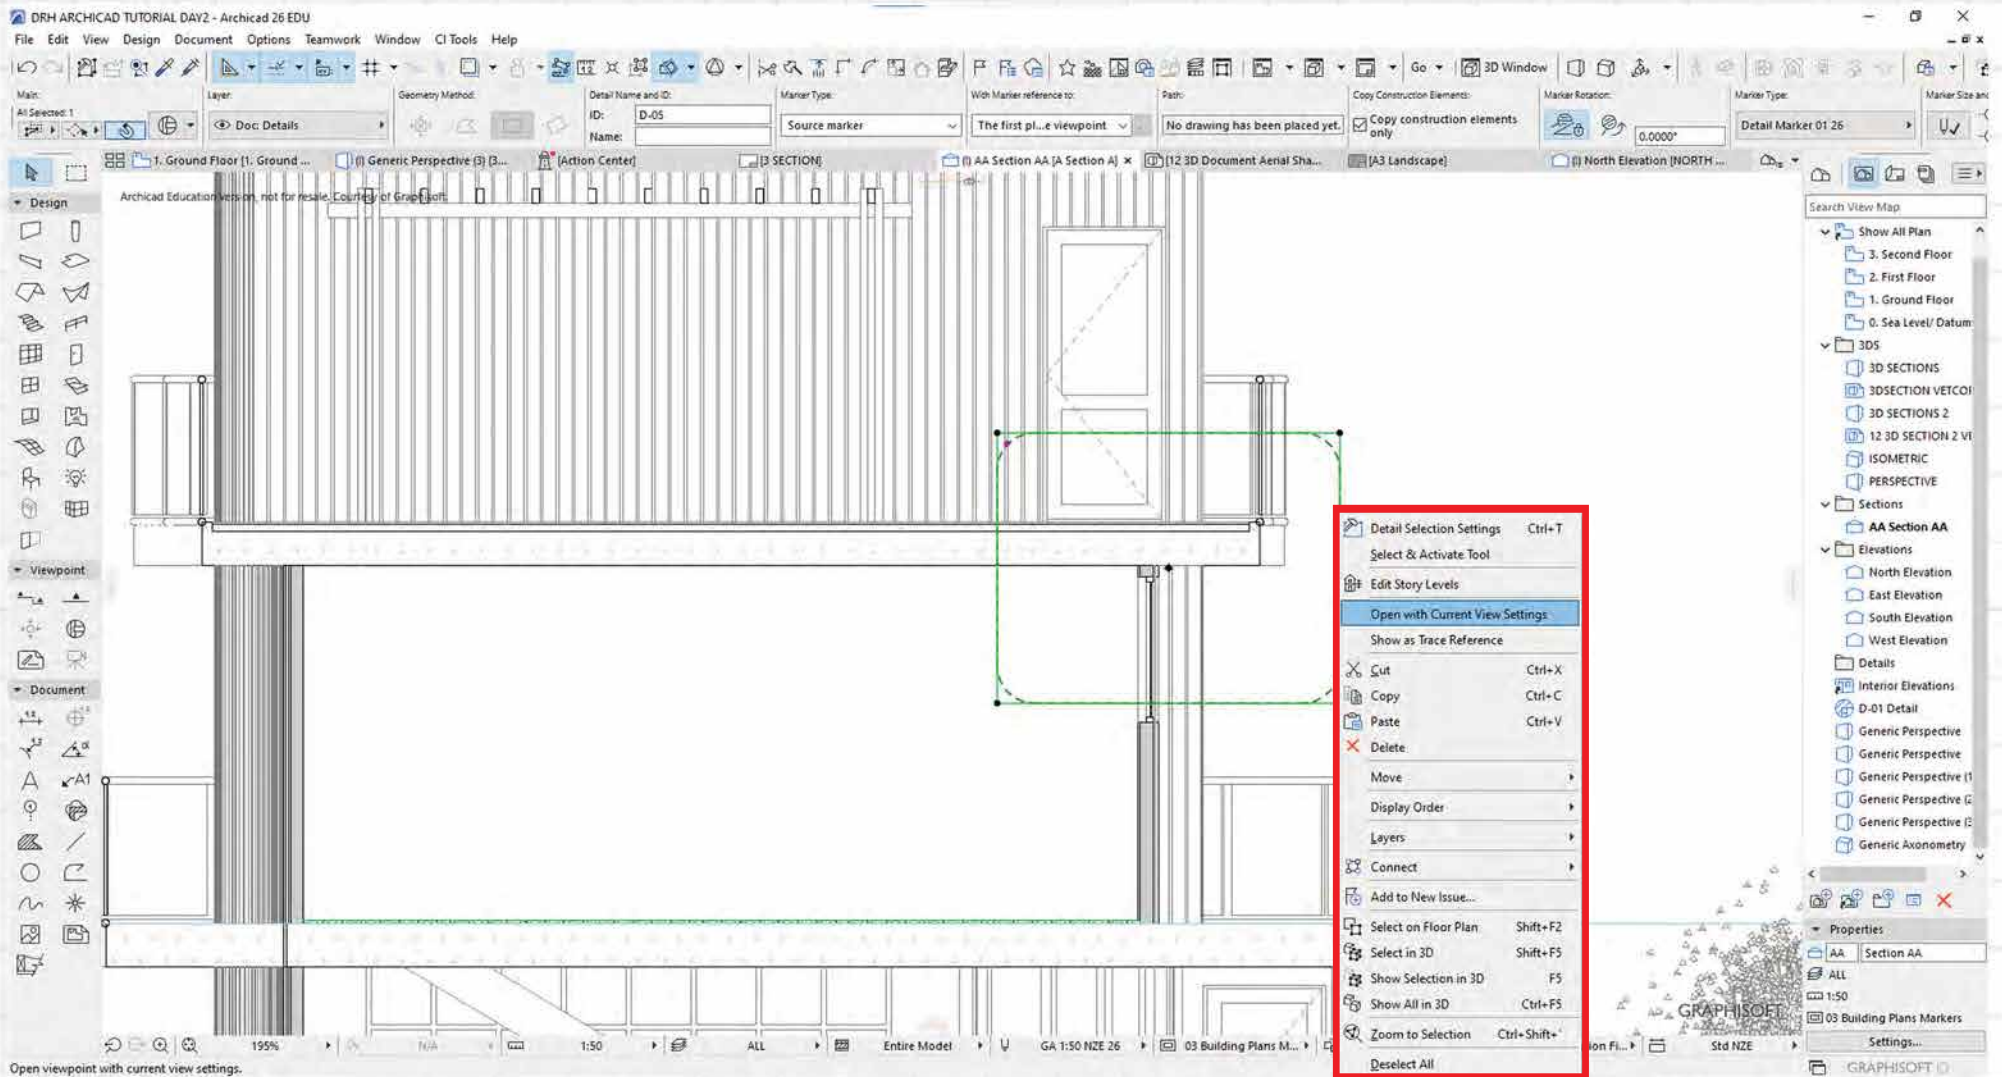

1. Select the detail marker tool

2. Draw over area to be detailed

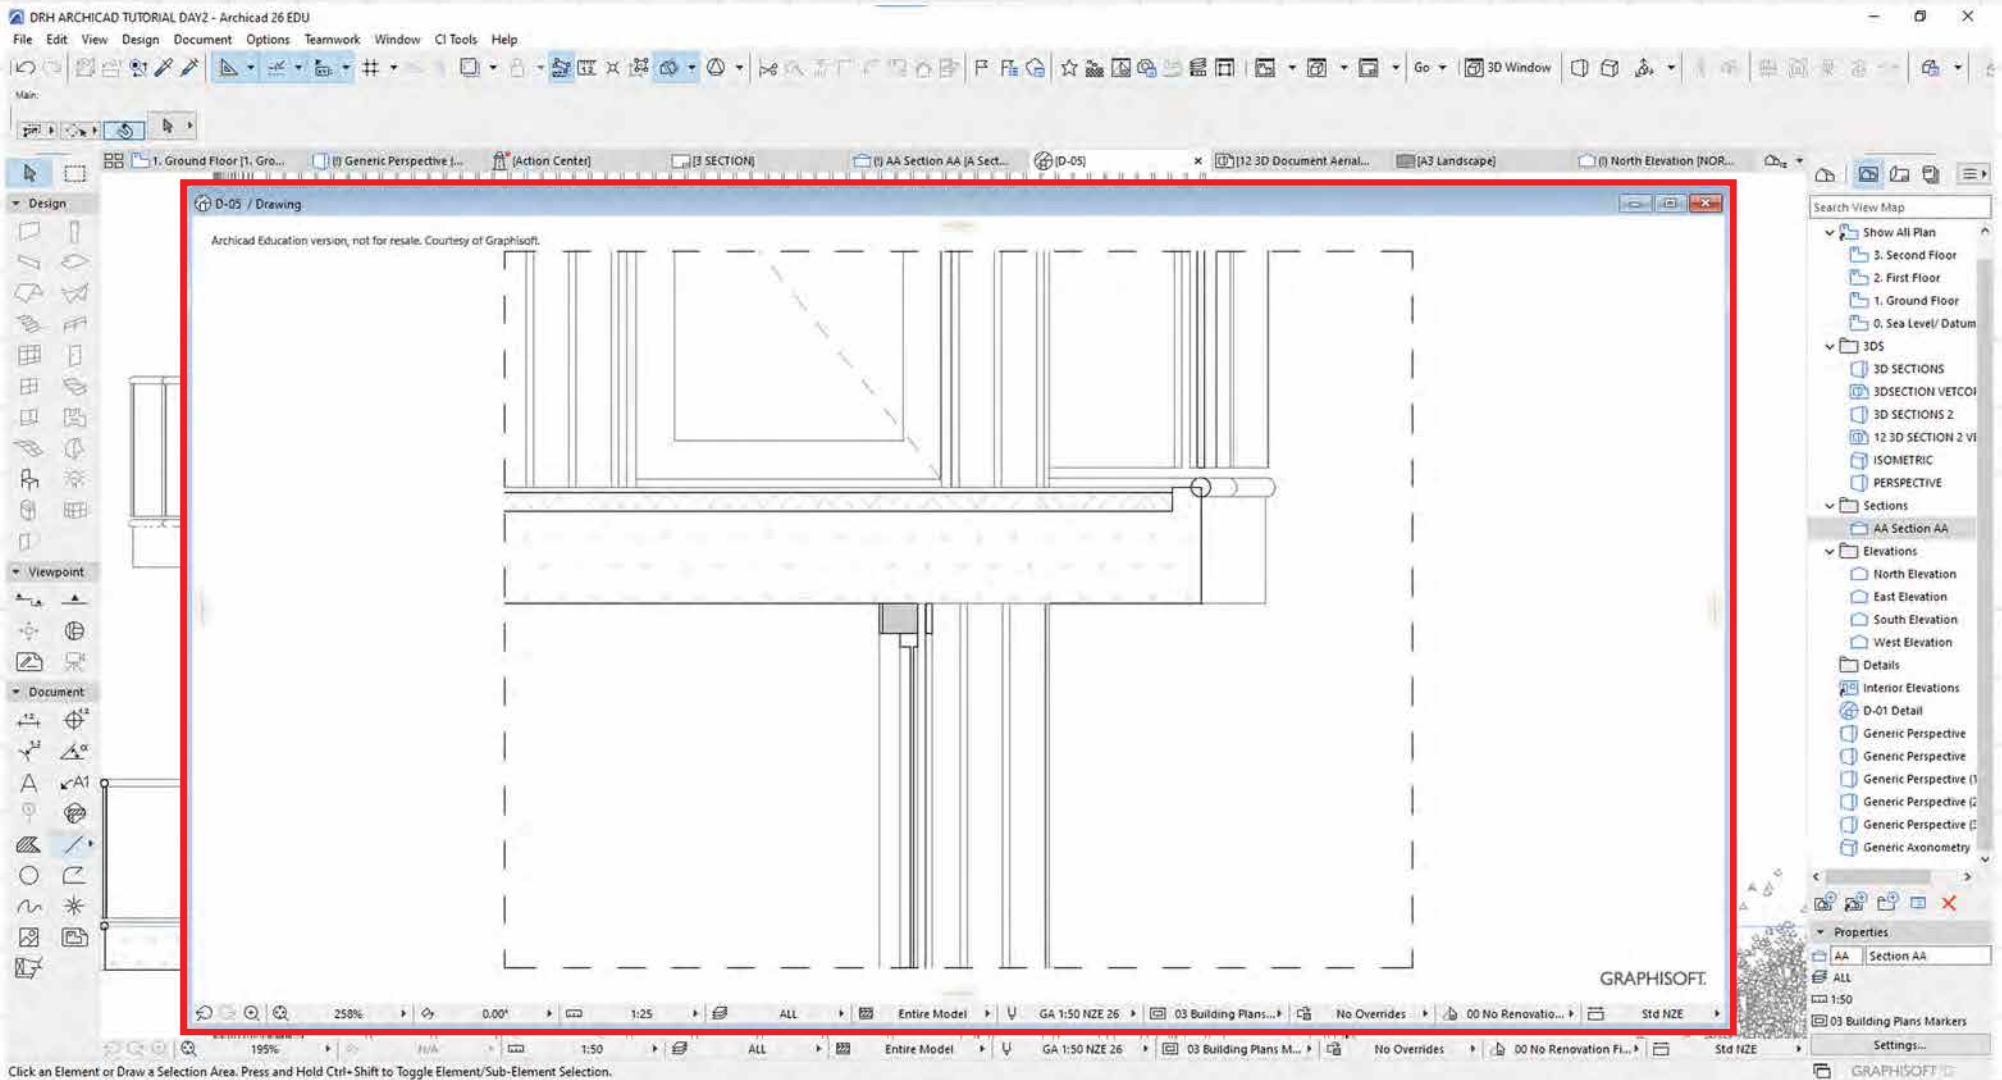

3. Press Hammer cursor to place detail

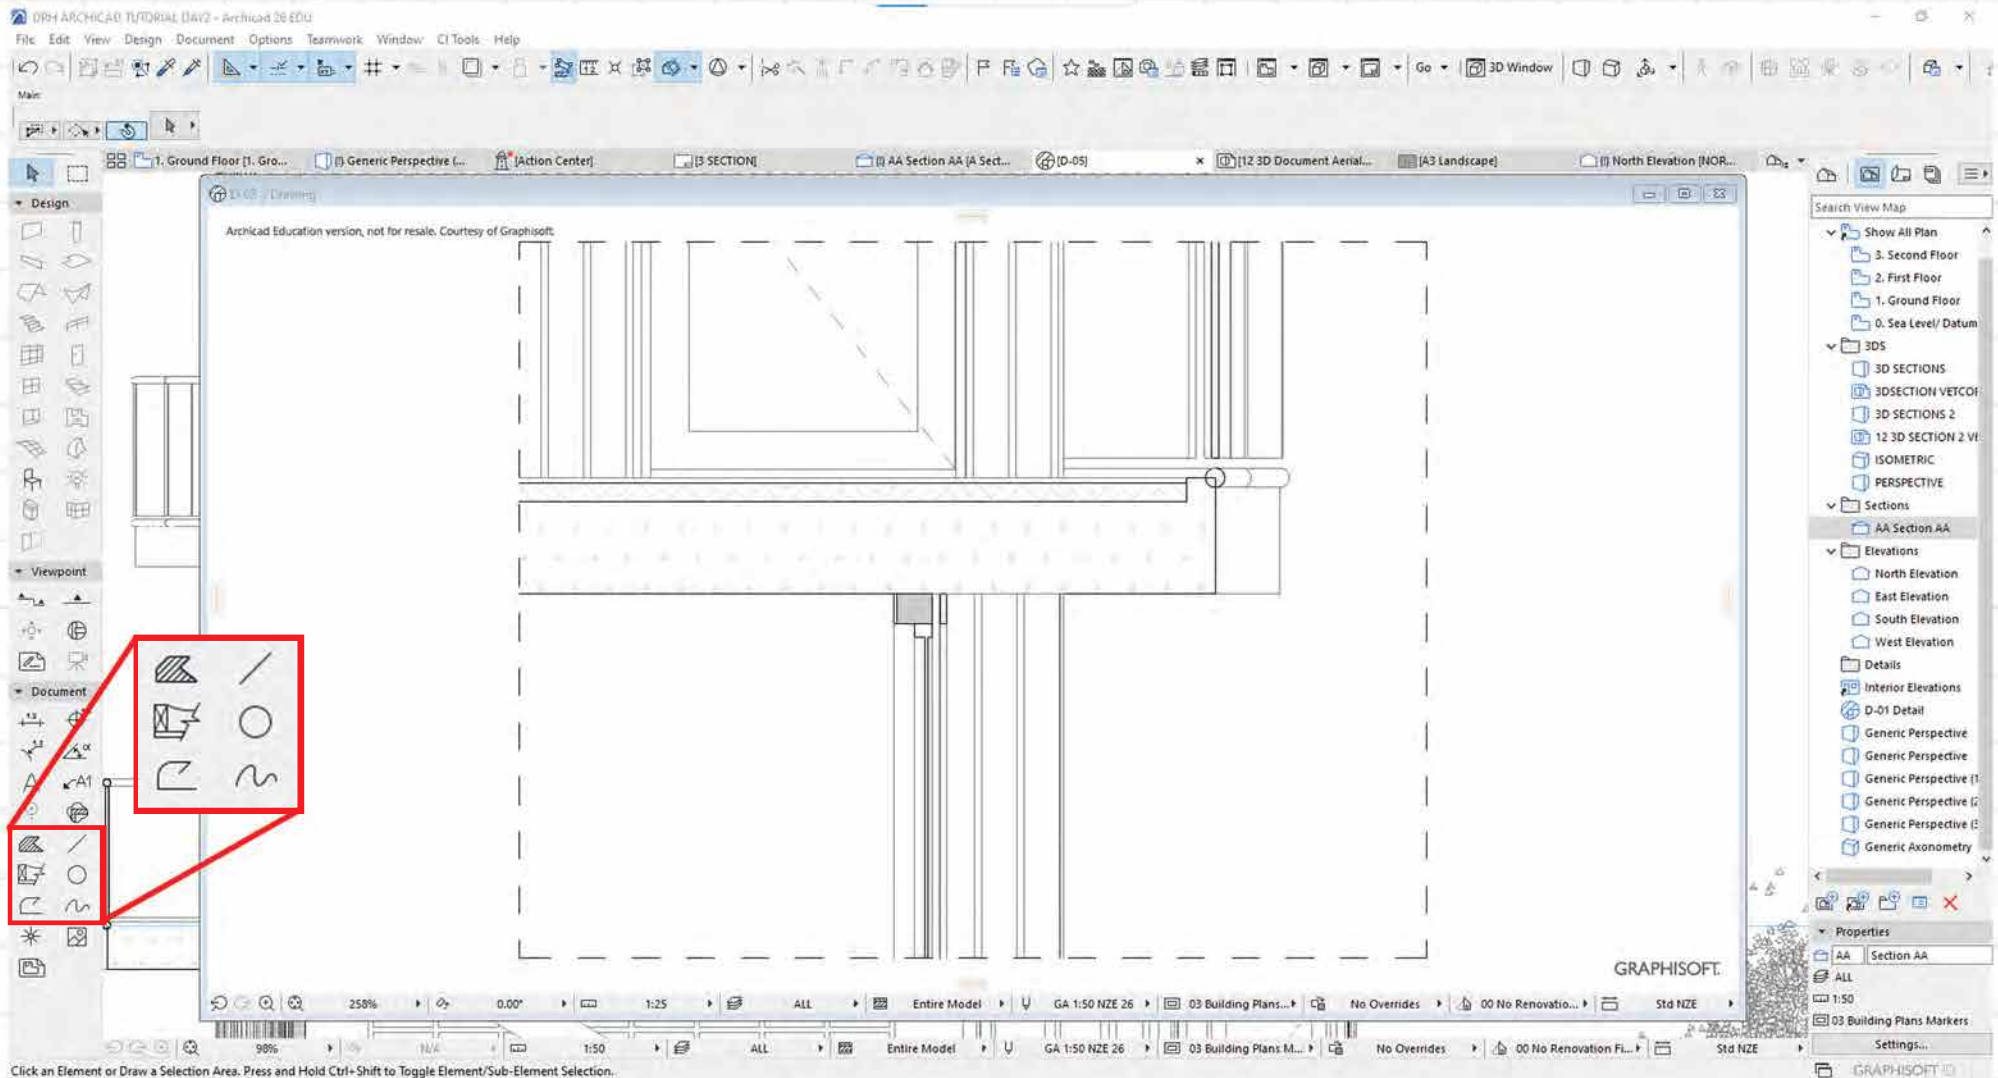

- Open the detail drawing in the view settings, by right clicking on the detail marker

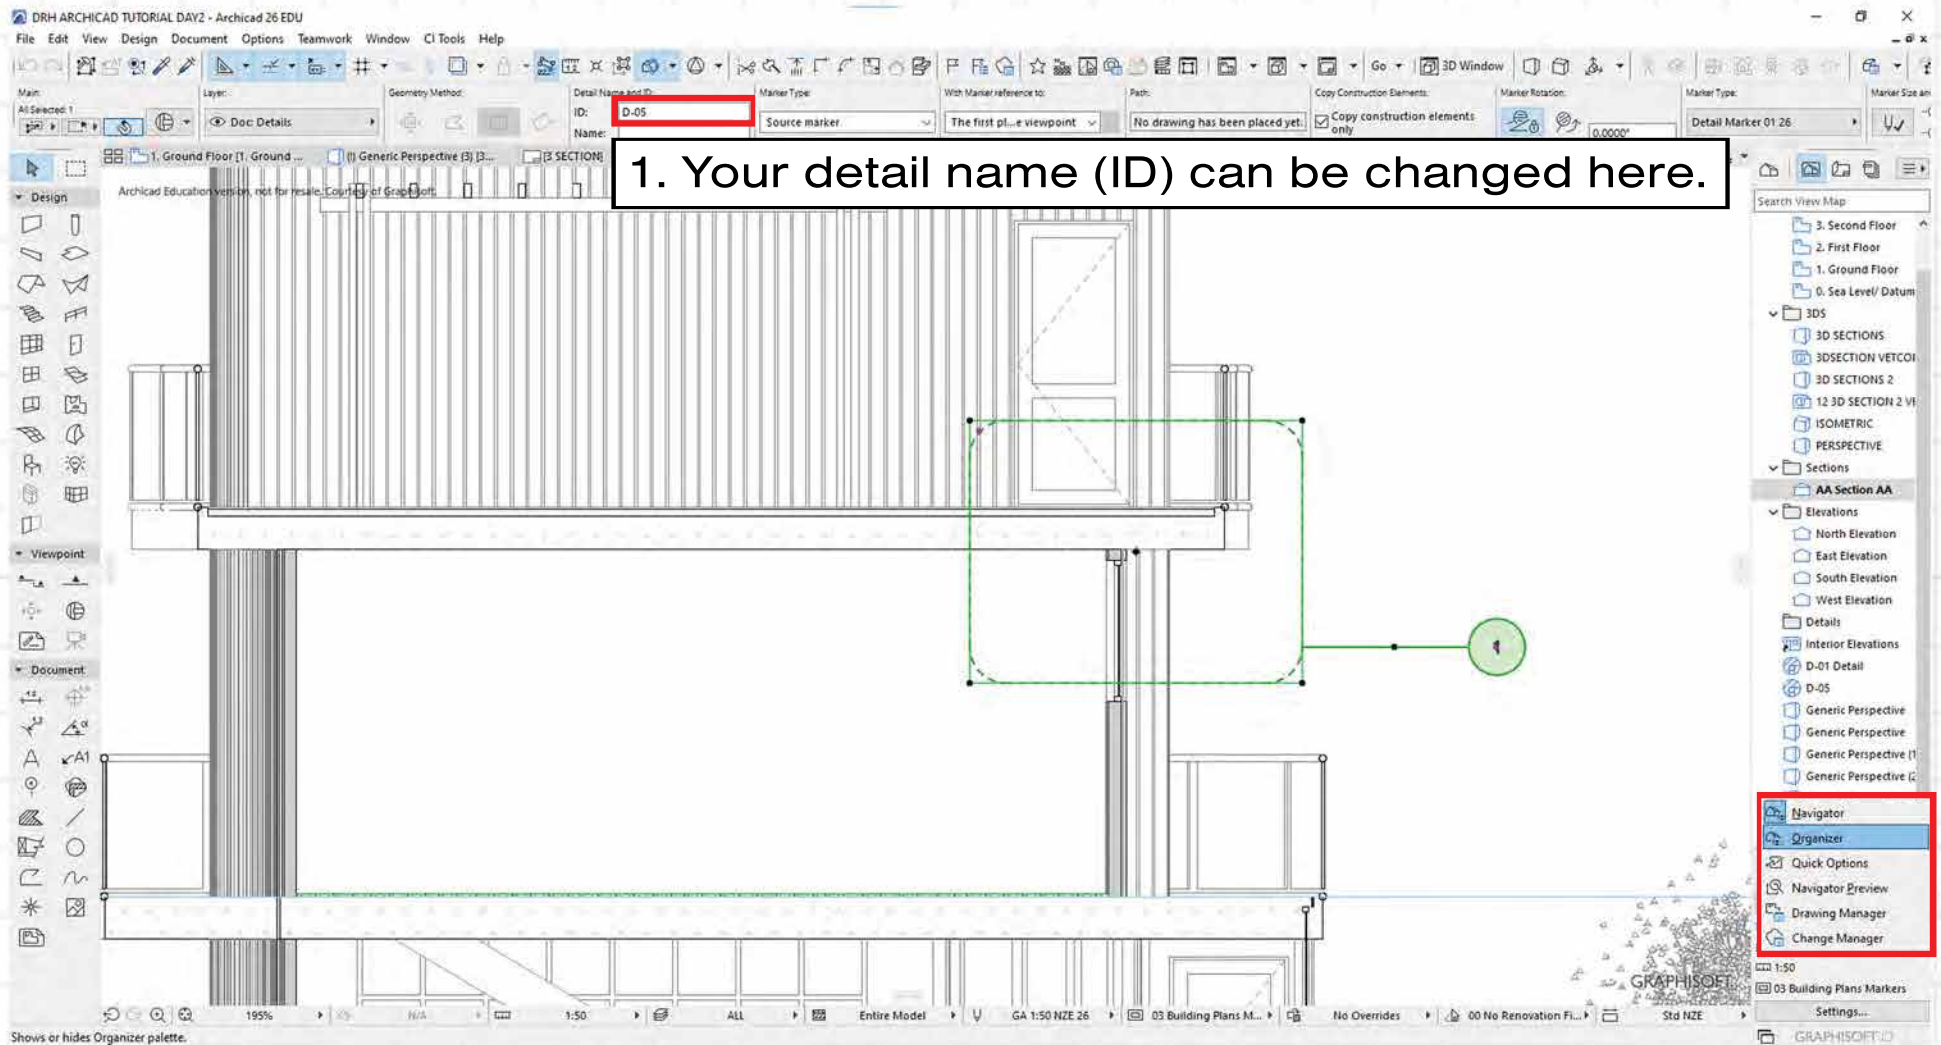

- . The detail view will open up, allowing you to make changes to the drawing, if necessary.

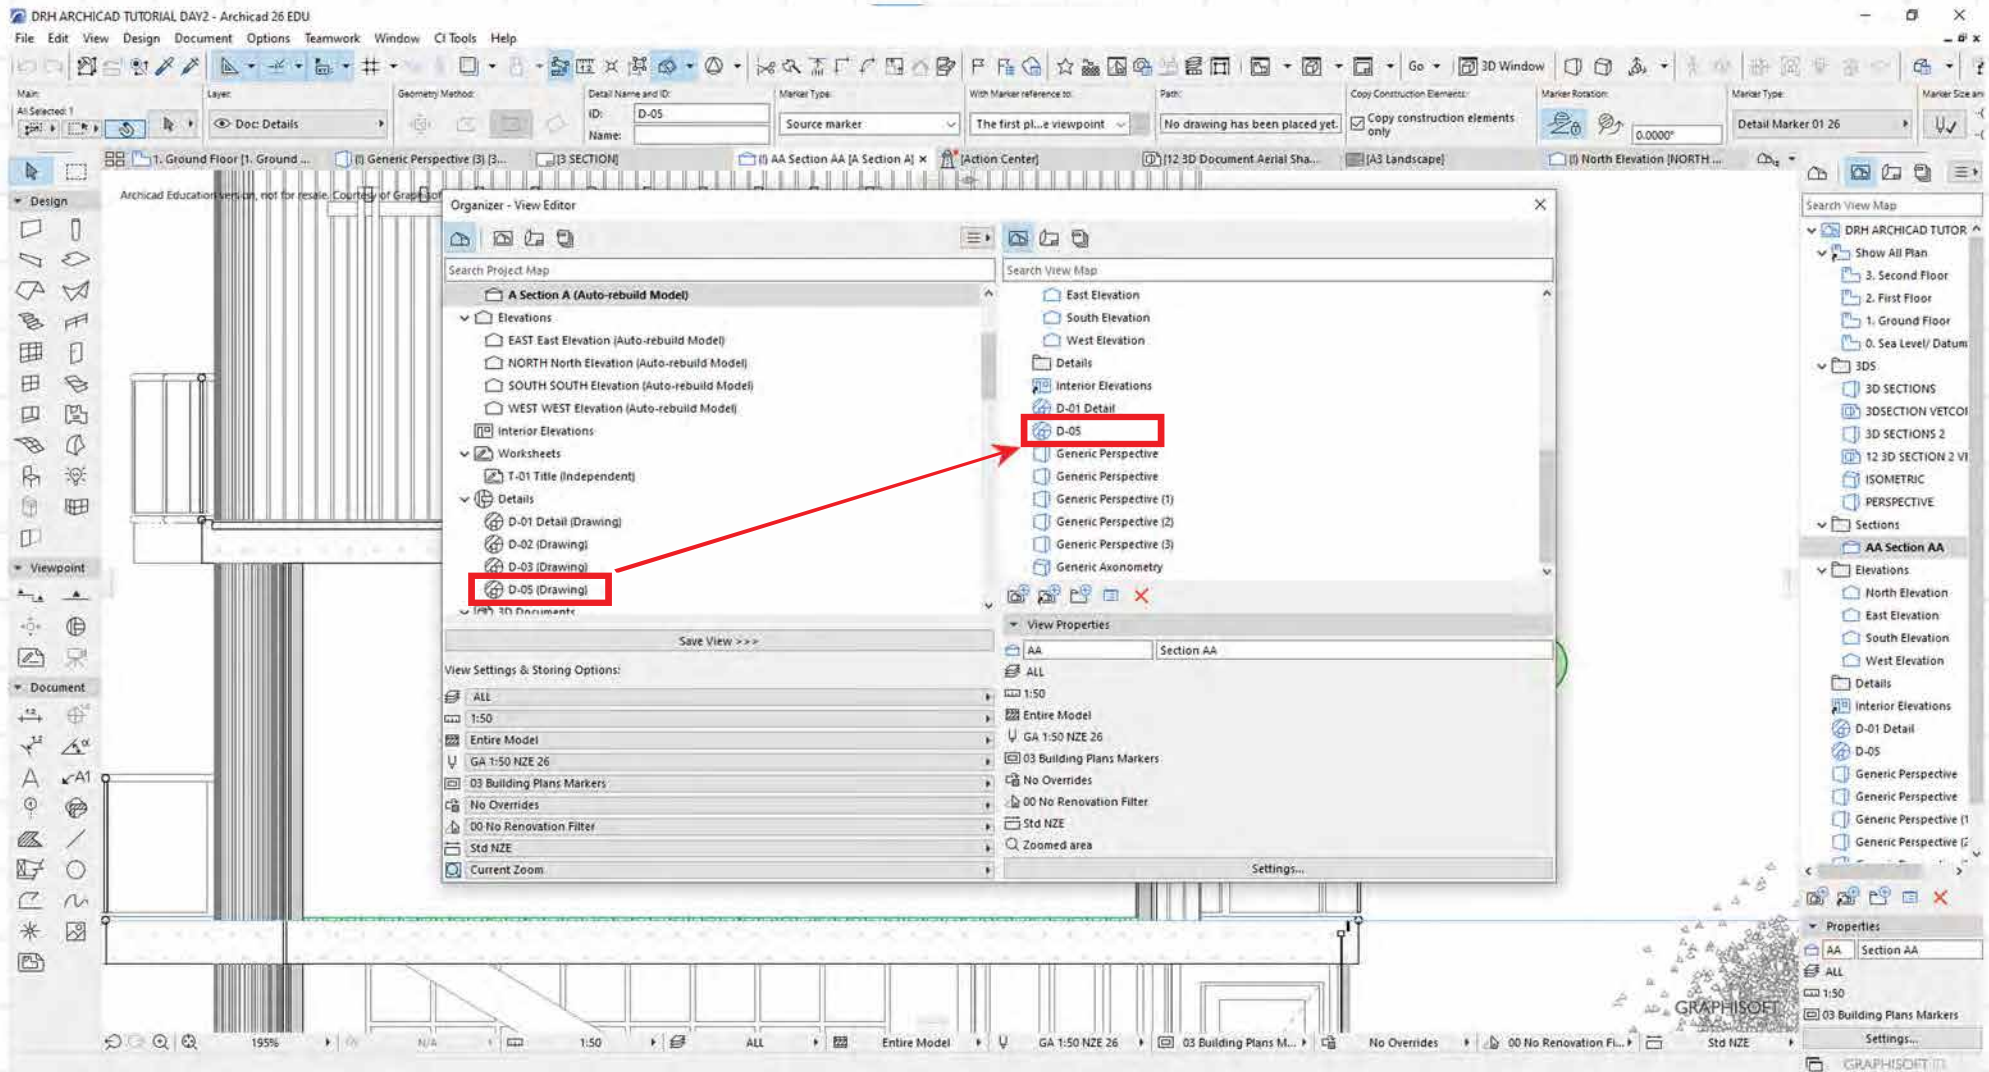

. You can use these tools to edit the drawing. By adding lines, hatches or detail material elements.

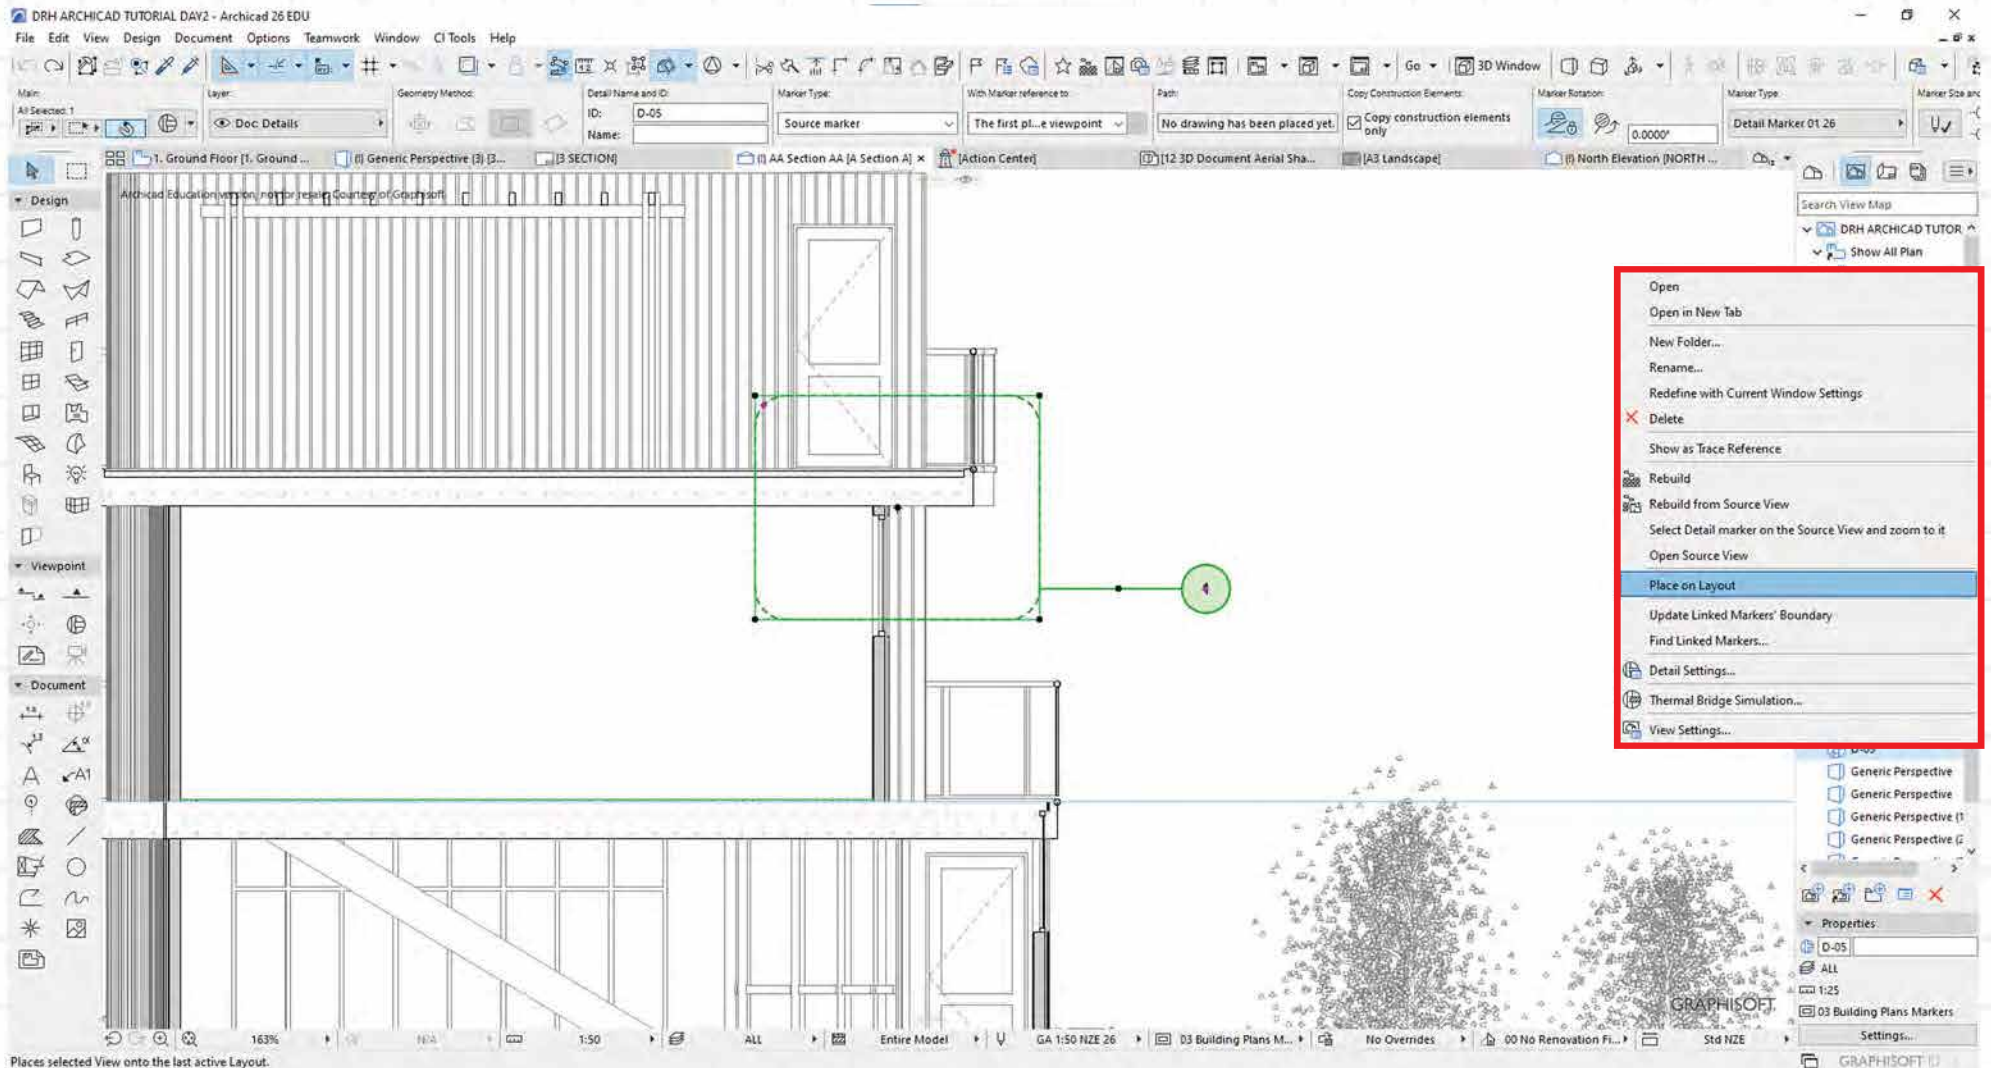

- Right click the navigation bar and select 'Organizer' to access the detail you just created.

. In this Navigator Project map, under Organizer, drag your detail to your view map to access the detail.

- Once you have edited your detail drawing, you can place it on your layout to export, by right clicking.

- Once you have added your detail to your Section drawing layout, you can export it from ArchiCad.
